

TOMATO TWINE

PRODUCT DESCRIPTION

Venhardt's Tomato Twine is used mostly in greenhouses for tying tomatoes, capsicums, and other climbing plants to garden structures and trellises. It is a strong twine that absorbs minimal moisture, making it well-suited for use in free fall situations. With one cut, you can produce 50 identical lengths, offering efficiency and convenience.

The twine is designed with a loose winding to ensure strands separate cleanly without twisting or tangling. Its soft and flexible nature ensures gentle handling, avoiding any damage to the plants.

PRODUCT FEATURES

- Ideal for tying tomatoes, capsicums and climbing plants.
- Minimal moisture absorption.
- Suitable for free-fall tying applications.
- 50 identical lengths
- Loose winding allows tangle-free separation.
- Soft and flexible.
- Designed for efficient use in greenhouse applications.
- UV stabilised
